### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- You must **show all your working**.
- Diagrams are **NOT** accurately drawn, unless otherwise indicated.
- **Calculators may not be used.**

### Information

- The total mark for this paper is 80
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

Answer ALL questions.

Write your answers in the spaces provided.

You must write down all the stages in your working.

1 Work out the value of  $\frac{3^7 \times 3^{-2}}{3^3}$

(Total for Question 1 is 2 marks)

2  $v^2 = u^2 + 2as$

$u = 12 \quad a = -3 \quad s = 18$

(a) Work out a value of  $v$ .

(2)

(b) Make  $s$  the subject of  $v^2 = u^2 + 2as$

(2)

(Total for Question 2 is 4 marks)

- 3 A bonus of £2100 is shared by 10 people who work for a company.  
40% of the bonus is shared equally between 3 managers.  
The rest of the bonus is shared equally between 7 salesmen.

One of the salesmen says,

“If the bonus is shared equally between all 10 people I will get 25% more money.”

Is the salesman correct?

You must show how you get your answer.

(Total for Question 3 is 5 marks)

4 It would take 120 minutes to fill a swimming pool using water from 5 taps.

(a) How many minutes will it take to fill the pool if only 3 of the taps are used?

..... minutes  
(2)

(b) State one assumption you made in working out your answer to part (a).

.....  
.....  
(1)

(Total for Question 4 is 3 marks)

5 A plane travels at a speed of 213 miles per hour.

(a) Work out an estimate for the number of seconds the plane takes to travel 1 mile.

..... seconds  
(3)

(b) Is your answer to part (a) an underestimate or an overestimate?  
Give a reason for your answer.

- 9 The times that 48 trains left a station on Monday were recorded.

The cumulative frequency graph gives information about the numbers of minutes the trains were delayed, correct to the nearest minute.

The shortest delay was 0 minutes.

The longest delay was 42 minutes.

- (a) On the grid below, draw a box plot for the information about the delays on Monday.

(3)

48 trains left the station on Tuesday.

The box plot below gives information about the delays on Tuesday.

- (b) Compare the distribution of the delays on Monday with the distribution of the delays on Tuesday.

(2)

Mary says,

“The longest delay on Tuesday was 33 minutes.

This means that there must be some delays of between 25 minutes and 30 minutes.”

- (c) Is Mary right?

You must give a reason for your answer.

(1)

(Total for Question 9 is 6 marks)

10 (a) Simplify  $\frac{x-1}{5(x-1)^2}$

11 Jack and Sadia work for a company that sells boxes of breakfast cereal.

The company wants to have a special offer.

Here is Jack's idea for the special offer.

Put 25% more cereal into each box and do **not** change the price.

Here is Sadia's idea.

Reduce the price and do **not** change the amount of cereal in each box.

Sadia wants her idea to give the same value for money as Jack's idea.

By what percentage does she need to reduce the price?

## General marking guidance

These notes offer general guidance, but the specific notes for examiners appertaining to individual questions take precedence.

- 1 All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.

Where some judgement is required, mark schemes will provide the principles by which marks will be awarded; exemplification/indicative content will not be exhaustive. When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the response should be sent to review.

- 2 All the marks on the mark scheme are designed to be awarded; mark schemes should be applied positively. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme. If there is a wrong answer (or no answer) indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

**Questions where working is not required:** In general, the correct answer should be given full marks.

**Questions that specifically require working:** In general, candidates who do not show working on this type of question will get no marks – full details will be given in the mark scheme for each individual question.

- 3 **Crossed out work**

This should be marked **unless** the candidate has replaced it with an alternative response.

- 4 **Choice of method**

If there is a choice of methods shown, mark the method that leads to the answer given on the answer line.

If no answer appears on the answer line, mark both methods **then award the lower number of marks**.

- 5 **Incorrect method**

If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks. Send the response to review for your Team Leader to check.

- 6 **Follow through marks**

Follow through marks which involve a single stage calculation can be awarded without working as you can check the answer, but if ambiguous do not award.

Follow through marks which involve more than one stage of calculation can only be awarded on sight of the relevant working, even if it appears obvious that there is only one way you could get the answer given.

**7 Ignoring subsequent work**

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question or its context. (eg. an incorrectly cancelled fraction when the unsimplified fraction would gain full marks).

It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect (eg. incorrect algebraic simplification).

**8 Probability**

Probability answers must be given as a fraction, percentage or decimal. If a candidate gives a decimal equivalent to a probability, this should be written to at least 2 decimal places (unless tenths).

Incorrect notation should lose the accuracy marks, but be awarded any implied method marks.

If a probability fraction is given then cancelled incorrectly, ignore the incorrectly cancelled answer.

**9 Linear equations**

Unless indicated otherwise in the mark scheme, full marks can be gained if the solution alone is given on the answer line, or otherwise unambiguously identified in working (without contradiction elsewhere). Where the correct solution only is shown substituted, but not identified as the solution, the accuracy mark is lost but any method marks can be awarded (embedded answers).

**10 Range of answers**

Unless otherwise stated, when an answer is given as a range (e.g. 3.5 – 4.2) then this is inclusive of the end points (e.g. 3.5, 4.2) and all numbers within the range.

**11 Number in brackets after a calculation**

Where there is a number in brackets after a calculation E.g.  $2 \times 6 (=12)$  then the mark can be awarded **either** for the correct method, implied by the calculation **or** for the correct answer to the calculation.

**12 Use of inverted commas**

Some numbers in the mark scheme will appear inside inverted commas E.g. "12"  $\times$  50 ; the number in inverted commas cannot be any number – it must come from a correct method or process but the candidate may make an arithmetic error in their working.

**13 Word in square brackets**

Where a word is used in square brackets E.g. [area]  $\times$  1.5 : the value used for [area] does **not** have to come from a correct method or process but is the value that the candidate believes is the area. If there are any constraints on the value that can be used, details will be given in the mark scheme.

**14 Misread**

If a candidate misreads a number from the question. Eg. uses 252 instead of 255; method or process marks may be awarded provided the question has not been simplified. Examiners should send any instance of a suspected misread to review.

### Guidance on the use of abbreviations within this mark scheme

<b>M</b>	method mark awarded for a correct method or partial method
<b>P</b>	process mark awarded for a correct process as part of a problem solving question
<b>A</b>	accuracy mark (awarded after a correct method or process; if no method or process is seen then full marks for the question are implied but see individual mark schemes for more details)
<b>C</b>	communication mark awarded for a fully correct statement(s) with no contradiction or ambiguity
<b>B</b>	unconditional accuracy mark (no method needed)
<b>oe</b>	or equivalent
<b>cao</b>	correct answer only
<b>ft</b>	follow through (when appropriate as per mark scheme)
<b>sc</b>	special case
<b>dep</b>	dependent (on a previous mark)
<b>indep</b>	independent
<b>awrt</b>	answer which rounds to
<b>isw</b>	ignore subsequent working

## Modifications to the mark scheme for Modified Large Print (MLP) papers. Paper 1H.

Only mark scheme amendments are shown where the enlargement or modification of the paper requires a change in the mark scheme.

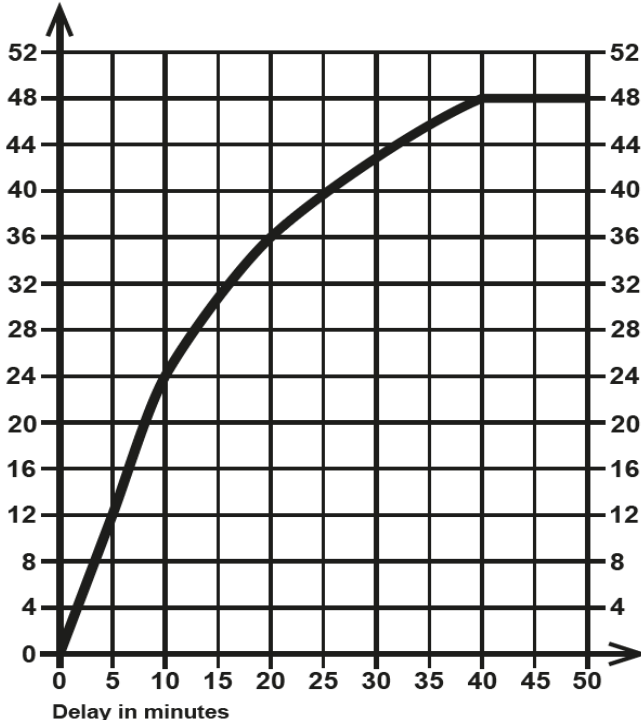

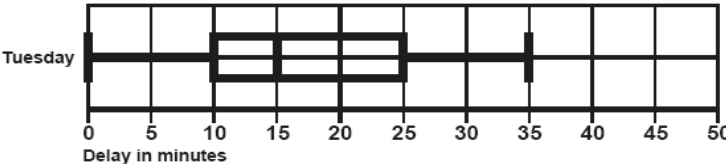

The following tolerances should be accepted on marking MLP papers, unless otherwise stated below:

Angles:  $\pm 5^\circ$

Measurements of length:  $\pm 5$  mm

PAPER: 1MA1_1H			
Question		Modification	Mark scheme notes
7		Diagram enlarged. Shading has been changed to dotted shading. $DC$ labelled 20 cm.	Standard mark scheme
8	(b)	Diagram enlarged. Angle moved outside of angle arc and angle arc made smaller. Wording changed to ‘It shows a right-angled triangle $ABC$ . $AB = 4$ cm $AC = x$ cm Angle $ABC$ is a right angle Angle $BAC = 60^\circ$ ’.	Standard mark scheme

Question		Modification	Mark scheme notes	
9		Diagram enlarged. Right axis labelled. Axes labels moved to the left of the horizontal axis and above the vertical axis. Horizontal axis marked in units of 5 from 0 to 50. Vertical axis marked in units of 4 from 0 to 52. Graph lines changed to go through the following points: (5, 12), (10, 24), (20, 36), (40, 48) Graph line to finish at 48. Wording changed from ‘The longest delay was 42 minutes.’ To ‘The longest delay was 40 minutes.’		
9	(a)	Diagram enlarged. Wording ‘below’ removed. Horizontal axis label moved to the left of the axis and marked in units of 5 from 0 to 50.	Standard mark scheme for the box plot drawing, but note that the box is drawn to the following points: Min LQ Median UQ Max 0 5 10 20 40	
9	(b)	Horizontal axis label moved to the left of the axis and marked in units of 5 from 0 to 50. Wording ‘below’ removed. The box plot has been drawn as follows: Min LQ Median UQ Max 0 10 15 25 35	Standard mark scheme but note the comparisons could use the revised numbers quoted herein.	
9	(c)	Question wording changed to ‘The longest delay on Tuesday was 35 minutes. This means that there must be some delays of between 27 and 32 minutes.	Standard mark scheme but answers could use the revised numbers quoted herein.

11		Frames removed from information.	Standard mark scheme
12		Diagram enlarged. Angles moved outside of angle arcs and angle arcs made smaller. <i>DAE</i> line made slightly shorter.	Standard mark scheme
13		Diagram enlarged. Letters deleted from inside the shapes but shapes labelled as ‘triangle A’ and ‘triangle B’. Shading changed to dotty shading. Grid cut to (-5,5). Wording added ‘It shows triangle A and triangle B on a grid.’	Standard mark scheme
14	(b)	For Braille only: $a$ changed to $w$ , $b$ changed to $x$ and $c$ changed to $y$	Standard mark scheme but note letter changes for braille.
17		Diagram enlarged.	Standard mark scheme
18	(a)	Diagram enlarged.	Standard mark scheme
18	(b)	Diagram enlarged. Wording ‘On the grid’ removed. Wording ‘It shows a grid’ added.	Standard mark scheme
21		Diagram enlarged.	Standard mark scheme
